Art Unit:

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-14, drawn to a method of regulating the autonomic nervous system by administering various natural product alcohols.

II. Claims 15-19, drawn to various natural product alcohol compositions.

III. Claim 20, drawn to a vaporization system consisting of a physical element providing energy to produce heat sufficient for vaporizing compounds.

The presented inventions are only linked by the presented specification; with each invention requiring separate, distinct search, and consideration. The instant application was filed under 35 USC 371, requiring restriction by unity of invention. The authority for this restriction practice is found in 37 CFR 1.499. To restrict a case filed under 35 USC 371, the Examiner need not consider the burden posed by examining additional inventions; although such burden is present in the instant case.

Patent Cooperation Rules (PCT) Rules 13.1 and 13.2 permit in a single application only one invention. Thus, an application presenting more than one invention, as in the instant case, is appropriately restricted for lack of unity.

The above delineated inventions differ as methods of use, composition of matter and a device not specifically adapted to use with composition, or to practice the method. These machines, compositions and methods of therapy are independent and patentably distinct each from the other. The grouped inventions differ as to their physical form and intended use, a reference which would anticipate the invention of

Art Unit:

one group would neither anticipate, nor make obvious the inventions in the other groups. The searches are not co-inclusive as indicated by the diverse nature of the subject matter. One skilled in the art would readily practice the invention of one of the above groups with out infringing and or practicing the invention of another group. The subject matter is unique and has acquired a separate status in the art and is fully capable of supporting separate patents. For the foregoing reasons restriction is proper for examination purposes.

The grouped inventions are patentably distinct, a reference which would anticipate, or make obvious, any invention from groups I-III would not necessarily obviate, or anticipate, the inventions in any other group. The searches are not co-inclusive as indicated by the diverse nature of the subject matter, thus, would represent an undue burden on Examiner. One skilled in the art would readily practice the invention of one of the above groups with out infringing and or practicing the invention of another group. The subject matter is unique and has acquired a separate status in the art and is fully capable of supporting separate patents. For the foregoing reasons restriction is proper for examination purposes.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variations or clearly admit on the record that this is the case. In either instance, if Examiner finds one of the inventions unpatentable over

Art Unit:

the prior art, the evidence may be used in a rejection under 35 USC 103 of the other invention.
